

### **No Light Troubleshooting (Bulb Model)**

1. Try replacing the bulb. We recommend a quality Haag-Streit bulb, which you can purchase on the [Haag-Streit USA eShop](#).

2. Use 1000 grit sandpaper to grind down excess solder that has turned black on the contact spring. Do not bend the spring and do not use a screwdriver! Stop grinding when the surface appears smooth.
3. If the problem persists, [please fill out the Support Request form for additional assistance](#).
